

EVENTBASE LTD – CCTV SYSTEM UPGRADE

Eventbase had an old analogue CCTV System which was installed around 10 years ago with poor image quality cameras that was no longer fit for purpose and required replacing. The client was interested in hearing about the latest HD-CVI technology using the high definition cameras over the existing older type coaxial cable. DankoSec was able to offer a solution by Dahua by replacing the head end System Camera Recorder with new 4.0MP cameras whilst also setting the client up with remote view technology at a much cheaper cost than replacing the whole system.
