

HAWAIKI SUBMARINE CABLE LTD – NEW INSTALLATION

Hawaiki required an integrated Electronic Security System solution combining Access Control, Video Intercoms, CCTV and Intruder Detection Systems for both their HQ Office in Auckland and their new Cable Landing Station in Mangawhai Northland, working with McKay Electrical as the main contractor.

A high end professional market leading NZ supplier was chosen for the Access Control and Intruder Detection System in order to allow full visual and remote control of the sites through Intelligent Maps as well as providing integration with Biometrics and CCTV interfacing with IP Video Intercoms.

Both installations were completed within budget and on time with very tight timescales post client occupancy by DankoSec providing outside of normal working hours teams in order to minimise disruption to the client's day to day business operations.
